Can Raw Food REALLY Boost My Dog's Health?

Whether your dog is suffering from chronic ear infections, indigestion, dental disease, itchy skin, obesity, or you just want to help them live a long time with fewer vet visits, raw dog food can help.

But some whole food ingredients can contain antibiotics, pesticides, hormones, and other additives that may keep your dog feeling sick, **even after you switch to raw food.**

"It was heartbreaking to watch Oliver, our new Frenchie puppy, constantly have to stop playing to scratch. We tried so many raw foods, which helped stop the itch, but he was still licking his paws every night. That's why we created Bone Appetit Raw Food with all organic ingredients, and now, Oliver is looking and feeling his best, and always he licks the bowl clean. He's unstoppable!" - Danielle Engleman, Founder

Bone Appetit Raw Dog Food is specially formulated to combat itching and help maintain a healthy weight by taking organic produce, free range poultry and grass-fed beef, and **breaking them down into highly digestible, easy-to-feed recipes.**
